21.7 million people aged 12 or older needed substance use treatment. 2.3 million (10.8%) received treatment at a specialty facility in the past year.*

Among adults aged 18 or older, 43.4 million adults had any mental illness in the past year. 18.6 million (43%) received mental health services.†

9.8 million adults 18 or older had a serious mental illness in the past year.† 6.4 million (65%) received mental health services.†

8.1 million adults had a co-occurring mental illness and substance use disorder in the past year.†

† Center for Behavioral Health Statistics and Quality. (2016). Key substance use and mental health indicators in the United States: Results from the 2015 National Survey on Drug Use and Health, NSDUH Series H-51, HHS Publication No. SMA 16-4984

* Receipt of substance use treatment at a specialty facility is defined as substance use treatment a respondent received at a hospital (only as an inpatient), a drug or alcohol rehabilitation facility (as an inpatient or outpatient), or a mental health center. People are defined as needing substance use treatment if they had an SUD in the past year or if they received substance use treatment at a specialty facility in the past year.
In 2015, approximately 20.8 Million* people aged 12 or older had a substance use disorder in the past year.
